

Partnership with Jos Warmer

itemis AG sets foot in the Dutch market

Lünen, Germany – February 1st, 2012. itemis AG has agreed a partnership in the Netherlands with the company Warmer IT. Name giver in the neighboring country based firm is Jos Warmer, internationally recognized expert for model-based software development and pioneer in the field of open-source.

From this step, the IT-house from Lünen promises to position its consulting business for methods and procedures of model-based development in the Dutch market. There should moreover be a broadening of the Eclipse-based YAKINDU-products for a continuous software and system development (www.yakindu.com). Both companies have agreed a close cooperation in order to benefit from the experience and specialized knowledge from each other respectively.

Warmer IT (<http://www.openmodeling.nl>) is the official itemis-partner for the Netherlands. Warmer is an »old friend« for itemis. Already with the Eclipse-project »Spray« (<http://code.google.com/a/eclipselabs.org/p/spray>) there is a successful Dutch-German collaboration between the new partners. Warmer has established a name for himself as the author of a number of books and regularly appears on conventions and conferences as a speaker.

Jos Warmer is looking forward to the collaboration: »I have worked with a number of itemis people before and have always been impressed with their craftsmanship. itemis is the driving force behind many Eclipse Modeling projects and direct access to their unique knowledge is very valuable.«

itemis director Wolfgang Neuhaus is pleased to be working with Warmer IT: »With Jos we have a respected expert in the field of model-based software development who can fully support our YAKINDU-products and services. We are confident that together it will succeed in further developing our good position in the market.«

About itemis

itemis AG, having its headquarters in Lünen, is an independent IT-consulting company. The company was founded in 2003 and by now employs 150 associates at several sites in Germany as well as in France, Canada and Switzerland.

itemis AG is a branch neutral technology leader in the field of automatized software development. It offers software development tools and services for the markets of business applications, applications for mobile devices and embedded systems. Research and

training are additional specialties.

itemis AG is one of the five strategic Eclipse members seated in Germany. The Lünen company provides a team of eight developers, contributing to the Eclipse Modeling Project and significantly participating in the development of the open source generator-framework openArchitectureWare (oAW). Wolfgang Neuhaus, member of board of itemis AG, and leader of development Ed Merks are members of the board of the »Eclipse-Foundation«.

Further information about the company and current research projects can be found at www.itemis.de as well as <http://twitter.com/itemis>
